

## Tomato truss culture

< Cocktail Supreme tomatoes at left

### Physical characteristics of Wormswork 100% organic worm castings.

- Hygroscopic, so the Wormswork castings media retains moisture.
- High in microbial activity, ideal for establishment and in nutrient depleted media.
- No odour; pH 7.2; low N:P:K
- Rewets well after dry periods and is a reliable organic nutrient buffer, that aids root growth.

### Benefits of using Wormswork Liquid Gold

- Significant root development without canopy development, due to only 1.8% N, but rich micronutrients.
- Roots develop even in winter at > 6°C.
- Very high micro-organism count to enhance nutrient uptake with high humic content & natural fungistatic action.
- Certified organic by NASAA.
- Significant carbon sequestration.
- No sediment particle so easily sprayed, or used in fertigators or drippers.
- Price includes delivery.
- Available in 25 litre drums or bulk

### Applications — Solid

- When planting tomato seedlings vines add Wormswork Castings at the rate of 250 grams per planting hole and incorporate into the root zone. This is your organic buffer for nutrient exchange and the worms have loaded it with micro-organisms that accelerate nutrient breakdown, uptake and rapid root development.

### Applications — Liquid

- Foliar spray tomato trusses and foliage with Wormswork Liquid gold at 20 parts water to 1 part Wormswork at any stage during growth cycle; no agitation is required. This leaves an anti-fungicidal sheen on the foliage and fruit and best of all there is no withholding period!  
Ideal for in-line fertigators or drippers, as there is no residue.
